

Project Design Phase
Problem – Solution Fit Template

Date	29 June 2026
Roll No	23A51A4271
Project Name	Visitor Management System
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The **Visitor Management System in ServiceNow** addresses the challenges organizations face in managing visitor registration and approvals using manual processes. Traditional visitor management often leads to delays in approvals, paperwork, poor visitor tracking, and security risks. This solution automates the complete visitor management process using **ServiceNow Service Catalog, Flow Designer, approval workflows, and email notifications**. It enables employees to submit visitor requests online, automates approvals, tracks visitor status, and maintains check-in/check-out records, resulting in improved security, transparency, and operational efficiency.

Purpose:

- Automate the visitor request and approval process.
- Enable employees to submit visitor requests through the Service Catalog.
- Improve visitor tracking with real-time status updates.
- Streamline approval workflows for faster decision-making.
- Reduce manual paperwork and administrative effort.
- Enhance security through authorized visitor approvals.
- Improve employee and visitor experience with an easy-to-use system.
- Maintain accurate visitor records for reporting and auditing.
- Reduce repetitive tasks for IT teams, allowing them to focus on high-priority activities.
- Increase transparency, reliability, and efficiency in handling network service requests.
- Enhance customer satisfaction by providing a user-friendly and automated request management system.
- Support organizational productivity by delivering secure, accurate, and timely network services.

Problem – Solution Fit Template

Project Title: Visitor Management System

Date: _____

Prepared By: _____

Version: _____

PURPOSE

- Automate the visitor request and approval process to reduce manual effort and processing time.
- Enable employees to submit visitor requests through a simple self-service portal.
- Improve visitor tracking with real-time status updates and automated notifications.
- Streamline approval workflows to ensure faster decision-making and enhance security.
- Reduce manual paperwork and administrative effort.
- Enhance employee and visitor experience with an easy-to-use and efficient system.
- Maintain accurate visitor records for reporting, auditing and compliance.

1. PROBLEM

1.1 Customer Segment

Who are the users / customers facing this problem?

1.2 Problem Statement

What is the exact problem the users are facing?

1.3 Current Impact

What are the effects of this problem on users and the organization?

1.4 Existing Alternatives

What solutions are they using today? Why are they not satisfied?

1.5 Root Cause

What is causing this problem to exist?

PROBLEM – SOLUTION FIT

How well does the solution address the real problem of the user?

2. SOLUTION

2.1 Proposed Solution

What is your solution to the problem?

2.2 Key Features

What are the main features of your solution?

2.3 Benefits to User

How does your solution solve the problem for the user?

2.4 Unique Value

What makes your solution better or different?

2.5 Success Measures

How will you measure if your solution is successful?

3. EVIDENCE OF FIT

Evidence Type	Description	Source / Method	Key Findings
User Feedback			
Surveys / Interviews			
Prototype Testing			
Usage / Behavior Data
